
GREEN LAB PLEDGE

Commitment to Environmentally Responsible Computing

I, _____, as a trainee in the Cyber Threat Monitoring Level I program, pledge to practise the following environmentally responsible habits in this lab and in my future workplace.

Digital-First Practices

- ☐ I will keep evidence and worksheets digitally wherever the assessor permits it
- ☐ I will share files through the shared folder or a USB drive rather than on paper
- ☐ I will take notes digitally when it is practical to do so
- ☐ I will not print screenshots that can be stored as image files

Energy Conservation

- ☐ I will switch off my monitor during lunch and long breaks
- ☐ I will shut my computer down properly at the end of each day
- ☐ I will not leave a machine running overnight unless the trainer has asked me to
- ☐ I will use sleep mode when I step away briefly
- ☐ I will not leave a virtual machine or a scan running when I leave the room

Why this matters in a security lab specifically: monitoring tools and scans are designed to run continuously. A vulnerability scan left running overnight consumes power, generates heat, and produces log data that nobody reads. Stopping what you started is both good practice and good discipline.

Responsible Printing

- ☐ I will print double-sided whenever possible
- ☐ I will preview before printing so I do not waste pages
- ☐ I will use draft quality for anything that is not a final document
- ☐ I will reuse single-sided paper as scratch paper for drills

E-Waste Awareness

- ☐ I will not put batteries, cables, or electronic components in the general waste bin
- ☐ I will report damaged equipment to the lab administrator rather than discarding it
- ☐ I will handle hardware carefully so that it lasts longer

- ☐ I understand that storage media may hold sensitive data and must be **wiped or destroyed properly**, not simply thrown away

Why this matters in a security lab specifically: a discarded hard drive or USB stick is a data breach waiting to happen. Secure disposal of storage media is both an environmental practice and a security control. The two are the same action.

Resource Conservation

- ☐ I will switch off lights and air conditioning when the room is empty
 - ☐ I will report water leaks or dripping taps in the lab area
 - ☐ I will keep my workstation and the lab clean and organised
-
